

**New Slow Close Plastic Seats Designed for
New Construction and Multi-Family
Applications**

by:

PLUMBTECH™

Model 225 Elongated

Model 224 Round

What Is The Need and Opportunity for New Construction Oriented Slow Closing Seats?

- The new residential construction market is always evolving and searching for ways and means to bend the cost curve while maintaining the overall quality of the final product.
- Additionally, we have identified a major trend, a double digit annual growth or consumer demand for slow close seats.
- Our market surveys indicate as much as 50% of new home owners are replacing the toilet seats, installed by the building contractor within weeks of purchasing the home, with slow close seats.
- The overwhelming majority of new residential construction toilet seats are being replaced by new homeowners with better quality seats and upgrade features. The overwhelming majority of these seats are purchased in retail stores.
- It became clear that one of our goals had to be driving down the cost of slow close seats to be in the acceptable cost range of building contractors.
- The second goal had to be to design, engineer and manufacture a low cost slow close seat with the quality, features and fashion oriented designs a new home owner would appreciate.
